

# 1894-99. - Large Roman Surcharges

## The History of the Issue (Cont'd)

all the other Large Roman 2 Att settings by the occurrence in this case of 6 types of the Arabic figure 2 in the sheet.

A further delivery of 1 Att Surcharges took place on July 26<sup>th</sup>, 1914, all made from the same General Setting, and in this consignment there can be distinguished three different Settings (A2, B1, B2). The whole delivery totalled 750 sheets (90,000 stamps), but the precise proportions of the three settings are not yet certainly known.

1 Att, Setting A2.

1 Att, Setting B2.

1 Att, Setting B1.

Their special distinguishing features are as follows:-

Setting A2. The superfluous "s" is retained, and the various errors and varieties found in the two previous settings are also present. These varieties include an inverted period on stamp B6 in the sheet. This setting probably included about 250 sheets (30,000 stamps).

Setting B2. The superfluous "s" has been removed, but the inverted period on stamp B6 remained uncorrected. The number of sheets thus printed is unknown, but probably forms an extremely small proportion of the whole.

Setting B1. The inverted period is corrected. Certain other alterations in the length of the inscriptions seem to have been made at the same time, and the length of the Siamese Surcharge is on the whole less in Setting B1. than in B2, but it is impossible to distinguish single stamps or even small blocks of these settings with certainty.
